

Titan Gas and Power

Massachusetts Markets - Residential Information Disclosure Label: Simple Clean Power 12

GENERATION PRICE

Average price per kWh at different levels of use. Prices do not include regulated charges for customer service and delivery.

Avg Monthly Usage	250 kWh	500 kWh	1,000 kWh	2,000 kWh
Avg Price	\$11.99	\$11.99	\$11.99	\$11.99

Price includes a monthly base fee of \$0.00 Average price per kWh at different levels of use. Your average generation price may vary according to when and how much electricity you consume. See your most recent bill for your monthly use and actual price.

Term: **24 Months** Energy Charge: **11.99 ¢** per kWh

Early Termination Fee: \$150.00 Cancellation Fee

POWER SOURCES

Titan Gas and Power projects that demand for electricity for all its customers in the period 1/1/2020 –12/31/2020 will be met by generation from the following sources.

Power Source	Known Source	System Power	Total
Biomass	--	0%	0%
Coal	--	3%	3%
Hydro - Large	--	1%	1%
Hydro - Small	--	0%	0%
Imported Power	--	20%	20%
Municipal Trash	--	0%	0%
Natural Gas	--	38%	38%
Nuclear	--	29%	29%
Oil	--	8%	8%
Other Renewable	--	1%	1%
Solar	--	0%	0%
Wind	--	0%	0%
Total	--	100%	100%

AIR EMISSIONS

Carbon Dioxide (CO₂), nitrogen oxides (NO_x), sulfur dioxide (SO₂) emission rates from these sources, relative to the regional average is compared to emissions from a new unit as determined by the Mass Department of Environmental Protection.

LABOR INFORMATION

76% of the electricity from System Power came from power sources with union contracts with their employees.

INFORMATION DISCLOSURE LABEL - DEFINITIONS - For More Information: Massachusetts Division of Energy Resources website: <http://www.mass.gov/doer/> | Department of Public Utilities website: <http://www.magnet.state.ma.us/dpu/>

GENERATION PRICE	Generation Prices displayed are representative average prices for electricity at usage levels that are typical for commercial customers. Contract items displayed present the length of your contract for generation service and the price terms included in your contract. See your recent bills to determine average monthly use and your Terms of Service for additional information.
POWER SOURCES	Titan Gas and Power procures its electricity supply, on behalf of its customers, from system power contracts, not from specific generating units. The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England. System Power represents power purchased in the regional electricity market. The System Power distribution presented in the table is based on the most recently available information provided via the NEPOOL Generation Information System. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter.
EMISSIONS	<p>Emissions for each of the following pollutants are presented as a percent of the regional average emission rate. Arrows represent, for each pollutant, the emission rate from a hypothetical new generation facility.</p> <ul style="list-style-type: none"> • Carbon Dioxide (CO2) is released when fossil fuels (e.g., coal, oil and natural gas) are burned. Carbon dioxide, a greenhouse gas, is a major contributor to global warming. • Nitrogen Oxides (NOX) form when fossil fuels and biomass are burned at high temperatures. They contribute to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high-level exposure. NOX also contribute to oxygen deprivation of lakes and coastal waters, which is destructive to fish and other animal life. • Sulfur Dioxide (SO2) is formed when fuels containing sulfur are burned, primarily coal and oil. Major health effects associated with SO2 include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO2 combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.
LABOR INFORMATION	The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management, and protected by union contracts. The information in this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether a generator or supplier, during a strike by or lock-out of its employees, has replaced them with other workers.
